---

# Introduction

This document represents a change log from version 008000 to 009000 for the EDI Standard. It consists of five sections:

1. Transaction Set Tables (formerly X12.1)
2. Segment Directory (formerly X12.2)
3. Composite Data Elements (formerly part of X12.3)
4. Simple Data Elements (formerly part of X12.3)

## Format

For the syntactical content of the EDI Standard the content is arranged in a three column format. The first column identifies a standards entity. The second column concerns 008000 and the third column 009000. If the 008000 column is empty, that row represents new content with the detail in the third column. If the second column is populated and the third is not, that row represents content that was deleted. If both columns are populated, that row represents a change.

# EDI Standard Comparison

## Change Log from 008000 to 009000

The following 3 column presentation displays the type of entity, what is in 008000, and what is in 009000. If the center column is empty, the content is new. If the right column is empty, the content was deleted.

#### Notes

2/0250

The N1 segment denotes the jurisdiction for which the specified tax rate applies.

The N1 segment denotes the jurisdiction for which the specified tax rate applies.

### 157

#### Notes

2/0200

The NM1 segment describes the Agent to whom Power of Attorney is being granted, modified, or revoked, when occurring within an HL loop at Agent Level. The NM1 loop describes the Principal, who is the party on whose behalf Power of Attorney is being granted, modified, or revoked, when used within an HL loop at Principal Level.

The NM1 segment describes the Agent to whom Power of Attorney is being granted, modified, or revoked, when occurring within an HL loop at Agent Level. The NM1 loop describes the Principal, who is the party on whose behalf Power of Attorney is being granted, modified, or revoked, when used within an HL loop at Principal Level.

## 224

Purpose

This X12 Transaction Set contains the format and establishes the data contents of the Motor Carrier Summary Freight Bill Manifest Transaction Set (224) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to transmit multiple freight bills at the summary level to a single payor.

### Comments

1/100

This transaction set is used to convey information that is normally found on a shipping/receiving document and a invoice, in a paper environment. In most cases prices are excluded from the receiving documents. Care should be exercised to keep this information from the receiving area if it is the current practice to exclude such information. It may be prudent to consult an auditor or legal representative if there is any question.

| Purpose | <p>This X12 Transaction Set contains the format and establishes the data contents of the Electronic Form Structure Transaction Set (868) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide a structure for transfer of EDI standards, or portions thereof, in an electronic form. These EDI standards include but are not limited to: ANSI X12 standards, approved ASC X12 Transaction Sets, UN/EDIFACT standard messages, and industry EDI conventions and guidelines. It is intended to provide users with the following: The ability to send and receive EDI standards data which can be used to update application or translation software. The ability to exchange data maintenance information with trading partners about transaction sets, segments, composite data structures, elements and codes that will be used for EDI transmissions.
