    1.4.2. Ballot 9 MR 018319 was approved with 100% approval, but with one abstention with comment.

        1.4.2.1. Comment 1, abstention: "The AMA continues its long-standing support for the creation of a standard method of providing detailed information in advance of a potential procedure about whether prior authorization is required and what information would be needed to meet its criteria. We are concerned, however, that there appear to be numerous methods of conveying this information being explored within the industry at this time (e.g. (1) via the X12 271 transaction,

(2) via the X12 278 transaction, or (3) via the EHR-initiated Coverage Requirements Discovery being considered at Health Level 7). We are concerned about creating multiple "standards" that enable various methods of accomplishing the same task, as this could ultimately differ between payers and leave providers unable to discern how best to obtain this information from a particular payer. For these reasons, we abstain."

      1.4.2.2. Motion to approval the following response was passed unanimously: "Thank you for your comment. We will pass your concern on to the appropriate subcommittee."

   1.4.3. Ballot 15 MR 029319 was approved with 97.7% approval with one disapproval.

      1.4.3.1. Comment 2, disapproval: "Our organization does not oppose the intent of MR#029319, but the MR contains an incorrect segment reference. 'CR06,' should read 'CR6.'"

      1.4.3.2. Motion to approval the following response was passed unanimously: "Thank you for your comment. We will correct the typo."

Modify the name and definition of DE 447. This MR supports WR 00928.

Status: DEFERRED

Submitter: ASC X12C

Data Element(s): 447

Proposed Work:
Change the name of the element to Loop Identifier from Loop Identifier Code. Change the definition from: "The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE" to "The loop ID number given on the transaction set diagram is the value for this data element."
