- 2.1.1.2. MR 008318 is approved.

- 2.1.1.4. Formal RFI 2329 response is approved.

2.1.2. X12N

- 2.1.2.1. Has reworked the MR 018319 to provide a different solution.

Business Case/Reason For Change:

While a submitter is requesting eligibility and benefit information for a patient using the eligibility and benefit inquiry (270), allow the payer the opportunity to identify required clinical information for prior authorization; if applicable in the eligibility and benefit response (271).

Intended Use:

Set: 271

Element: EB17

Proposed work:

This MR is to add a repeating composite element C022 Health Care Code Information to the EB segment in position 17 that repeats 99 times. This will be an Optional composite element. The purpose is to identify clinical information to support the code value found in EB16, DE 1796 Health Care Services Review Requirement Code. For example, this would allow a payer to identify clinical information (using LOINC in the new composite) necessary for approval of a prior authorization as part of the eligibility response. The submitter of the prior authorization request could submit this information using the 278 request with an attached 275 transaction containing the requested clinical information.

Modify the name and definition of DE 447. This MR supports WR 00928.

Status: DEFERRED

Submitter: ASC X12C

Company: X12C

Subcommittees: C I M N

Reason For Change

The definition for DE 447 reads in part: "in segments LS and LE" but that only applies to bounded loops. The case for unbounded loops also applies. Additionally, the name of the element has the word code at the end, but it isn't really an internal code.

Data Element(s): 447

Proposed Work:

Change the name of the element to Loop Identifier from Loop Identifier Code. Change the definition from: "The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE" to "The loop ID number given on the transaction set diagram is the value for this data element."

Action Summary**DATA SEGMENTS**

Composite: C022

Proposed work:

This MR is to add a repeating composite element C022 Health Care Code Information to the EB segment in position 17 that repeats 99 times. This will be an Optional composite element. The purpose is to identify clinical information to support the code value found in EB16, DE 1796 Health Care Services Review Requirement Code. For example, this would allow a payer to identify clinical information (using LOINC in the new composite) necessary for approval of a prior authorization as part of the eligibility response. The submitter of the prior authorization request could submit this information using the 278 request with an attached 275 transaction containing the requested clinical information.

NOTES

- 2/1700 Successive occurrences of the PO5 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO5 segment is listed as 1 inch (imperial), in a second PO5 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/1800 Successive occurrences of the PO6 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO6 segment is listed as 1 inch (imperial), in a second PO6 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/1900 Successive occurrences of the PO7 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO7 segment is listed as 1 inch (imperial), in a second PO7 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/2000 Successive occurrences of the PO8 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO8 segment is listed as 1 inch (imperial), in a second PO8 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/2400 The ING segment is used to identify a product's ingredients excluding healthcare pharmaceuticals. The healthcare pharmaceutical information is provided in the TRT Loop.
- 2/4200 For the ALG loop, the ALG Segment identifies the product allergens, the N1 Segment identifies the agency responsible for the allergen statements, the REF Segment identifies the regulations pertaining to the specific allergens and the COM Segment provides the URL links to the specific regulation.
- 2/6900 The LX Loop will occur once for each product name or product variant name, identified in the NFE segment.

COMMENTS

- 2/8000 This segment provides the information from the Footer of the nutrition fact panel relating to the Calorie Diet(s). Example a 2000 or 2500 Calorie Diet, also includes the total Fat, Cholesterol, Sodium, Total Carbohydrates, and Dietary Fiber.

SYNTAX NOTES

- 04 C0403 - If ISX04 is present, then ISX03 is required.

SEMANTIC NOTES

- 03 Overriding code reference applies to interchange content.
- 03 Value must be a published ASC X12 version/release/subrelease of an X12 standard.
- 03 When an ISX03 value is received in an interchange, all code value validation for code values defined by the X12 base Standard will be made against the X12 version conveyed by this element. This value overrides, for code value validation only, the first six characters of GS08 when GS07 equals "X." This applies to any functional groups contained within the interchange, and does not override the transaction set, loop, segment, or data element attributes.
- 03 In order to use ISX03, the sender must have explicit agreement of the receiver.
- 04 When an ISX04 value is received in an interchange, all code value validation for code values defined by the X12 Standard will be made against the implementation guide conveyed by this element. ISX04 constrains the full set of codes from the X12 standard specified in ISX03.
