MR# 008318

Modify the name and definition of DE 447. This MR supports WR 00928.

Status: APPROVED FOR BALLOT BY PRB**Submitter:** ASC X12C**Company:** X12C**Subcommittees:** J**Reason For Change**

The definition for DE 447 reads in part: "in segments LS and LE" but that only applies to bounded loops. The case for unbounded loops also applies. Additionally, the name of the element has the word code at the end, but it isn't really an internal code.

Intended Use:

Segment(s): LS, LE

Data Element(s): 447

Proposed Work:

Change the name of the element to Loop Identifier from Loop Identifier Code. Change the definition from: "The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE" to "The loop ID number given on the transaction set diagram is the value for this data element."

Action Summary**DATA SEGMENTS**

Adds data element(s) to segments AK3, CTX, IK3, LE and LS. Changes requirement designator(s) in segments AK3, CTX, IK3, LE and LS.

Adds note(s) to segments AK3, CTX, IK3, LE and LS.

COMPOSITES

Creates composite C072.

SIMPLE DATA ELEMENTS

Creates simple data elements 1817 and 1818. Changes name of simple data element 447. Changes purpose of simple data element 447.

MR# 014120

Create a new DE and add it to the ST as ST04. This MR supports WR # 001012.

Status: DEFERRED

Submitter: DAVID FEINBERG

Company: I. M.

Subcommittees: C F I M N

Reason For Change

Commencing with X12 Standard release 00801 it is possible to specify a version of code sets to be used that is different from the version of the transaction set being communicated. This is done by populating data element ISX03 with the code set version to be used when it differs from the values in data elements GS08 and/or ST03.

Similarly to what may happen with values in ISA and/or GS segments, some translator products could strip off the ISX segment prior to application (ST-SE) processing. Providing the information from the ISX03 at the ST level will ensure that the appropriate code set usage mapping is utilized at translation time.

Intended Use:

Transaction Set(s): all

Segment(s): ST

Proposed Work:

Add a new data element to the ST segment that will contain the value from data element ISX03. Use of this new data element will be mandatory only ... when (a) a value is contained in data element ISX03, and (b) the value in data element ISX03 is different from the value in data element ST03.

MR# 016220

Modify semantic note 05 in the ALG segment. This MR supports WR # 001014

Status: APPROVED FOR BALLOT BY PRB

Submitter: ZUBAIR NAZIR

Company: GS1 CANADA

Subcommittees: J

Reason For Change

To clarify Semantic Note "05" that code "UUN" is used to indicate all the allergen data which is required to appear on the label or is relevant to be reported has been populated in the allergen section.

Intended Use:

Transaction Set(s): 832 and 897

Element(s):
Data Element(s): 1321
Code Source(s):
Other: Semantic Note

Proposed Work:

MODIFY Semantic Note "05" by adding the wording "with code UNN": ALG05 used only once and only after all the allergens in ALG02 have been identified with code "UUN".

MR# 017220

Modify section 2.3.8 in X12.61. This MR supports WR # 001015

Status: DEFERRED**Submitter:** CHRISTOPHER HIGHT**Company:** RAILINC**Subcommittees:** C F I J M N**Reason For Change**

As identified in the proposed response to RFI 2376 design rule 2.3.8 of X12.61 appears to be incomplete in that it prevents trailer segments from being present after any subordinate or nested loop. As suggested by the submitter, 005010X231A1 would currently violate this because of trailer segments used to close loop ID 2110 and the functional group.

Intended Use:
X12.61

Proposed Work:

Modify 2.3.8 to state "Within any logical area, loop, or nested loop, all standalone segments belonging to the parent structure (i.e., logical area, loop, or nested loop) shall appear in the sequence ahead of any subordinate or nested loop with the exception of trailer segments required to close that transaction, logical area, loop or nested loop." Additionally, suggest a modification to example 2.8 of X12.61 which clarifies that the segments CON through SSS are part of table 2, and the implied segments between table 2 and the NTE and SE segments reflect table 1 and table 3 respectively.

NOTES

- 2/1700 Successive occurrences of the PO5 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO5 segment is listed as 1 inch (imperial), in a second PO5 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/1800 Successive occurrences of the PO6 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO6 segment is listed as 1 inch (imperial), in a second PO6 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/1900 Successive occurrences of the PO7 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO7 segment is listed as 1 inch (imperial), in a second PO7 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/2000 Successive occurrences of the PO8 segment allows the sender to provide an equivalent value and unit of measure data for the same product attribute. This supports products that are labeled with both Imperial and Metric values, or if multiple values are listed using the same measuring system. As an example, if the product height in the first PO8 segment is listed as 1 inch (imperial), in a second PO8 segment the value would be 2.54 centimeters (metric). Or, a product label could list the product weight as 1 pound and 16 ounces.
- 2/2400 The ING segment is used to identify a product's ingredients excluding healthcare pharmaceuticals. The healthcare pharmaceutical information is provided in the TRT Loop.
- 2/3000 If TRT04 in loop 2300 is used TRD is required.
- 2/4200 For the ALG loop, the ALG Segment identifies the product allergens, the N1 Segment identifies the agency responsible for the allergen statements, the REF Segment identifies the regulations pertaining to the specific allergens and the COM Segment provides the URL links to the specific regulation.
- 2/6900 The LX Loop will occur once for each product name or product variant name, identified in the NFE segment.

COMMENTS

- 2/8000 This segment provides the information from the Footer of the nutrition fact panel relating to the Calorie Diet(s). Example a 2000 or 2500 Calorie Diet, also includes the total Fat, Cholesterol, Sodium, Total Carbohydrates, and Dietary Fiber.

SYNTAX NOTES

- 02 R0203 - At least one of N102 or N103 is required.
- 03 P0304 - If either N103 or N104 is present, then the other is required.
- 07 C0703 - If N107 is present, then N103 is required.

COMMENTS

- 04 This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
- 05 N105 and N106 further define the type of entity in N101.

SEMANTIC NOTES

- 01 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).
- 03 The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition. When used, this implementation convention reference takes precedence over the implementation reference specified in the GS08.
