

I have over 30 years of EDI experience and have participated in the electrical channels EDI Standards committee as a member representing two different electrical manufacturers and ran the Standards committee as employee of IDEA until a permanent Chair could be appointed.

I was also one of the original B2X committee members back when the group was being formed and finding its place in X12 RSC.

My objective should I be elected would be to bring the EDI challenges and needs of the electrical channel to X12 and the various committees along with our own knowledge of how EDI is conducted within the electrical channel. I feel the electrical sector has lots to offer in regard to helping to grow X12's presence in the channel as well as help standardize transactions used and needed by electrical manufacturers, distributors and representatives.

Thank you for your consideration.
