

X12C COMMUNICATIONS AND CONTROLS SUBCOMMITTEE

Interim Meeting Minutes

DECEMBER 9, 12 noon – 1 pm EST

Attendance—8 people, 6 constituents

1. Thursday, December 9

1.1. Administration

1.1.1. The January 13th meeting has been cancelled.

1.2. Pending

1.2.1. NM101 qualifier repetitions in the same loop: Gary Beatty will be submitting an MR for creating a white paper about this issue. The subcommittee plans on discussing this at the Winter Standing Meeting.

1.3. RFI Database

1.3.1. RFI 2539 “How is the character encoding identified based on the ISO standards listed as valid values?” Motion to approve the following response passed unanimously:

1.3.1.1. “X12 recognizes that there aren't enough code values for ISX02. X12C will submit maintenance requests to add values.”

1.3.1.2. The Chair will do research on possible additional ISX02 code values and how to indicate the exact encoding.

1.3.2. RFI 2540 “ISX04 - What is the purpose?” Motion to approve the following response passed unanimously:

1.3.2.1. “Section 5 of the document “The ISX Segment in Operation” at <https://isx.x12.org> addresses this RFI.

The purpose of ISX04 is to indicate that only the codes listed within a referenced implementation guide are usable. For example, data element 128, Reference Identification Qualifier has over 1,900 code values. Implementation guides usually don't allow the entire list and publish a subset. For this purpose, that subset is identified by content in ISX04. If a code not explicitly listed in the implementation is sent, that is an error condition when ISX04 is used.”

Meeting adjourned at 12:15 AM EST
