X12C COMMUNICATIONS AND CONTROLS SUBCOMMITTEE

Standing Meeting Minutes

JUNE 2, 11 a.m.-1:50 p.m. CDT

Attendance—7 people, 5 constituents

1. Monday, June 2

1.1. Administration: The Wednesday, 6/4 meeting was cancelled.

1.2. Active: RFI 2293

    1.2.1. Motion to approve the following revised response to RFI 2293, which was drafted by X12N|TGB|WG23, passed unanimously:

    The CTX Business Unit Identifier note states "Required when the error reported in this IK3 loop is within a business unit and the business unit identifier is known by the submitter of the 999. If not required by this implementation guide, do not send." In the case of invalid characters, the submitter of the 999 is unable use the business unit identifier due to syntax errors and therefore it is considered as unknown to the submitter of the 999. As such, the CTX Business Unit Identifier would not be sent based on the situational rule. In the case that the data contains more than 35 characters, the data should be truncated to contain the first 35 characters from the business unit identifier.

    1.2.2. This response will replace all previous RFI 2293 responses and recommendations

1.3. Since the X12F subcommittee has been deactivated, there is the question of how to reassign the X12F-assigned transaction sets. The ASC Chair asked if they could be reassigned to X12 in general.

Meeting recessed at 11:15 a.m. CDT
